

jComply SaaS

Software as a Service

jComply – a complete policies and procedures management system is also available as Software as a Service (SaaS). jComply SaaS is cost effective, faster to deploy, requires no initial capital outlay and is scalable.

What is SaaS?

Software as a Service (SaaS) is a method of delivering business applications over the internet. The business application is hosted and managed by the software provider. SaaS does not require any software or hardware investment and costs on a per user per month basis. SaaS customers do not purchase the software but instead the right to use the software. This makes it faster to get up and running with the application and more user accounts can be purchased as the customer's requirements increase.

Benefits

Cost effective solution – jComply SaaS customers are neither required to purchase hardware, software nor hire and train administrators to manage the application. Simply purchase the concurrent users you need and start using the application using Internet Explorer.

Auto upgrade to new releases – Since Tabaq Software is fully responsible to manage and host the application; customers automatically get access to all releases and new features.

Scalability – Buy the concurrent user licenses as you need them. Expanding will not require any capital investment, simply purchase the concurrent user licenses and Tabaq Software will do the rest.

Security – jComply SaaS is protected by a multi-layered security model consisting of antivirus, automated security patching, firewalls and vulnerability scanning. The network is also constantly monitored by our hosting team.

Low risk – jComply SaaS model carries little or very low risk for our customers. With zero initial capital outlay and low running costs, our customers are free to start small and purchase more concurrent users as their needs grow.

“SaaS is set to grow at nearly 34% per year, through to 2012. About 50% of that growth will be driven by the SME sector.

Source: Gartner

Predictable expenditure – In these highly volatile financial conditions and in the midst of credit crunch, the SaaS model is rated by Gartner to grow at nearly 34% per year. SaaS is ideal for our customers as they will know exactly how much they are spending per month.

Zero-down time – jComply SaaS model promises zero-downtime. That means application is available 100% of the time in each month. Network server backups are automatically maintained by Tabaq Software's hosting team which takes the headache of managing backups away from our customers.

jComply SaaS

Software as a Service

jComply

jComply is a complete 360° process of introducing policies and procedures in a company. Managers can create policy documents using our built-in word processor, push them through the review and approve workflow and then publish them to the audience. Users are informed through email notifications and the new tasks are also listed on their personal home page which remains listed until completion. jComply automatically manages the document versions and compresses the document for storage. The newly created document automatically inherits user access rights from its parent folder in the document library. Once the security has been set at a higher level in the file system, creating and managing documents is a simple process.

Managers can also design training exercises to ensure that employees are fully aware of the regulations and then carry out compliance test to demonstrate that their businesses are compliant with the regulations. Task scheduling, audit trail, email reminders and user's personal home page ensures that the process goes smoothly and compliance is achieved. Lastly, a comprehensive reporting suite is provided to generate high level and detailed reports for the management.
